SV-10/SV-100

Sine-wave Vibro Viscometers

Viscometry Revolution!

Measurement Principle

SV measures the viscosity by detecting the driving current necessary to resonate the 2 sensor plates at constant frequency of 30 Hz and the amplitude of less than 1mm

- Wide measurement range 0.3 – 10,000 mPa·s for SV-10, 1,000 – 100,000 mPa·s for SV-100
- Temperature measurement from 0 to 100°C
- High measurement accuracy for repeatability of 1% of reading for viscosity measurement
- Small sample size of 35ml and optional 10ml cup and 13ml glass cup
- Easy cleaning for sensor plates and temperature sensor
- WinCT-Viscosity for data collection to PC and graphical display
- Viscosity Calibration function by users
- Temperature control application with Water Jacket AX-SV-37

WinCT-Viscosity

RsVisco is software to import the measurements of viscosity and temperature by SV series to a PC automatically and display the measurement result by graph on a real-time basis, the scaling function and the logarithm display is selectable in the function.

Saving the measurement data by "CSV" file and open it on the RsVisco is very convenient for your future analysis of your sample fluid viscosity.
